

NET Reports 2.0 - Short Presentation

A lot of today and legacy database applications suffer a lack of data reporting and analysis tools. Why? It is really simple, the development teams was focused mainly on business logic, user interface and database design, the reporting and data analysis was not their primary, second or third objective. In this category we can found Enterprise Resource Planning, Employees Resource Management, Customer Relationship Management, Contact Management, Sales and Logistics solutions and a lot of other business database applications.

How to find and quick access usable information in our databases?

The same problems are faced by all kind of business starting with corporate and medium sizes to small offices. Solutions are provided by a lot of reporting and data analysis tools, any of them targeting specific needs from standard list reports to OLAP cubes and Business Intelligence data mining techniques. One of the industry sales leader is Crystal Reports that comes integrated in development tools like Microsoft Visual Studio.

NET Reports has options for dynamic reports, drill-down and Pivot Tables generation.

The multi-user client/server architecture used by NET Reports provides security, reliability, scalability and high usability to our solutions. Software that can be implemented in shortest time offering secured access to powerful reports.

NET Reports translates to "Reports for Peoples using the Network", offers reports that can be used in a network environment or over the Internet.

Benefits of "NET Reports 2.0" presentation for:

- **Business managers**
- **IT Consultants and Software integrators**
- **Database Administrators, Network and System Administrators**

NET Reports for Business top and middle management

Here we will point the benefits of NET Reports 2.0, we are confident that you will find at least three points that are very useful to you right now.

- NET Reports offers dynamic tabular data presentation: Crosstab, NET Crosstab and PivotTable using Ms. Office Excel automation. That allow report redesign after creation, possibility to chose your dimensions from available list, drill down and export data to different file formats.
- NET Crosstab loads only data that is displayed at one moment giving the possibility to access huge datasets in short time, lowering the bandwidth network traffic.
- Secure access your databases from virtually anywhere using the Internet. NET Reports offers high encryption levels by default using dynamic keys, hardware keys can be implemented for additional security. VPN's can be used depending on your company policies, not required by NET Reports 2.0.
- Access all your databases from a single interface that's easy to use and work effortless. Small to none training period.
- Smallest Total Cost of Ownership. Start with low costs and easy upgrade to cover your real needs. [Pay for what you will use.](#)
- Different reports access levels per users groups in your network.
- Short implementation time.

NET Reports for IT Consultants and Software Integrators

Here we will point the benefits of NET Reports 2.0, we are confident that you will find at least three points that are very useful to you right now.

- Short implementation time, NET Reports has tools that allow you focus only on Query and Report Implementation, check the [on line tutorial](#).
- Reliable and secure network client/server solution (128 Bit AES Rijndael encryption and dynamic keys)
- The server can be installed on Ms. Windows platforms starting with NT, XP or higher recommended
- Access any database system that provides an ODBC driver (Ms. Sql server, Oracle, Sybase, Pervasive, DB2, MySql, PostgreSQL, Interbase, Firebird, VFP, FoxPro, Dbase, Paradox, Access and others)
- Reports can be saved as templates for future use.
- Users and reports management interface. Easy to install client software.
- The server application is installed as windows service.

NET Reports for DBA and System Administrators

Here we will point the benefits of NET Reports 2.0, we are confident that you will find at least five points that are very useful to you right now. Information presented below can be useful also for IT developers and consultants.

- Powerful reports, create Ms. Office Pivot Tables effortless. All reports can be printed to PDF print drivers at your choice, check the [links page](#) to chose one if don't have already.
- Users and reports management interface. Easy to install client software.
- Small training period for average users of client application, help files provided.
- No additional software to be installed like IIS or Apache, only your database ODBC drivers. Has no dependencies on specific MS. operating system facilities (Can be installed on all Ms. NT platforms starting with NT 4.0 SP6, XP, Win 2000 servers and workstations, Win 2003, Vista - tests still running). The only dependencies is related to Ms. Office for reports to Ms. Excel. The NET Reports 2.0 Client works with MS. Office 97 or later.
- Access any database system that provides an windows ODBC driver (Ms. Sql server, Oracle, Sybase, Pervasive, DB2, MySql, PostgreSQL, Interbase, Firebird, VFP, FoxPro, Dbase, Paradox, Access and others). The server needs only read access rights. Connection strings are encrypted on server.
- The Client Application do not require direct access to your databases or data warehouses, all data reading operations are performed by the NET Reports server.
- We developed the client/server applications with additional care of security issues, therefore we have implemented a strong encryption mechanism with dynamic keys by default and hardware keys at request. VPN's can be used but not required by NET Reports applications.
- The client/server data transfer uses TCP/IP TCP sockets, the client access can be provided using a router/firewall using NAT port forwarding. The client/server connection is fault tolerant, a broken connection is fixed automatically). The data transfer works on Internet low band connections like dial-up.

The Client/Server can be downloaded for free from web page: <http://www.net-reports.net/downloads.html>. Shareware 30 days trial for server. The NET Reports 2.0 Client is free.
